SUMMARY

15+ years building data organizations from the ground up. Core expertise: understanding what drives people to engage, stay, and act, and building the systems and teams that turn behavioral insight into decisions.

EXPERIENCE

Electronic Arts (EA Sports) Jan 2022 – Feb 2026 *Director of Analytics*

- Scaled analytics from 3 analysts on 1 title to a pod of 16 including data scientists, engineers, and QA across 5 titles generating \$1B+ in annual revenue, building the intake processes, career pathways, and shared practices that turned the function into a strategic asset.
- Designed and implemented an analytics maturity framework moving teams from reactive reporting through proactive decision support to analytics that actively shaped product direction.
- Coached non-technical studio leaders from requesting reports to co-developing strategy, with analytical recommendations proving critical in multiple Q4 revenue target windows.
- Developed behavioral segmentation across the acquisition, engagement, retention, and monetization funnel, including lifetime value analysis that shifted franchise strategy away from short-term store pushes toward long-term player investment.

Facet Oct 2019 – Jan 2022 *Head of Analytics*

- Built the analytics function from scratch: hired a team of 5, designed the BigQuery data warehouse and dbt models, and created self-service infrastructure that eliminated analyst hand-holding for routine questions.
- Guided the organization through the full analytics maturity arc from evangelism and operational reporting through predictive modeling and prescriptive decision support.
- Led development of a linear programming model to optimize financial planner hiring, replacing subjective headcount guessing with data-driven resource allocation tied to revenue forecasts.
- Identified assets under management as the primary driver of client retention, shifting leadership focus from onboarding volume to deeper early engagement with higher-value clients.

Big Huge Games Mar 2013 – Jul 2019 *Head of Product Management & Analytics*

- First product and analytics hire at a studio building a \$175M+ mobile game. Grew the function to a team of 6 and owned both the analytical strategy and the product feature and live service roadmap.
- Designed and built the full analytics infrastructure from scratch: event taxonomy, Redshift schema, dashboards, and a studio-wide reporting portal.
- Applied behavioral segmentation across the acquisition, engagement, retention, and monetization funnel using conversion prediction and success evaluation to inform feature prioritization and live service decisions.
- Established a studio-wide product review process that embedded data-driven product thinking into weekly roadmap decisions, changing how leadership evaluated features and monetization tradeoffs.

Zynga Mar 2011 – Mar 2013 *Senior Analyst / Product Manager*

- Lead analyst on multiple game launches, building data pipelines, taxonomies, and launch reporting frameworks used across engineering, product, and operations.
- Developed behavioral personas showing that personalization strategies drove measurable revenue lift — among the first uses of segmentation-driven product strategy at the company.

PORTFOLIO WORK

Words That Work Experiment Designer 2026 *Independent Project*

- Built a Streamlit application using Claude API to evaluate advocacy messaging against the Words That Work research toolkit, automating message scoring, audience matching, and A/B experiment design.
- Implemented feedback loop of experiment results fed through AI to continuously update the underlying prompts, creating a self-improving system that gets smarter as more communications teams use it.

EDUCATION

University of Florida — M.S. in Mathematics, 1997

Brown University — B.A. in Applied Mathematics & Environmental Studies, 1992 | Magna Cum Laude, Phi Beta Kappa, Sigma Xi

SKILLS

Data & Analytics: SQL (expert), BigQuery, Snowflake, Redshift, dbt, A/B testing & experimentation frameworks, behavioral segmentation, audience segmentation, funnel analytics, retention & lifetime value analytics, BI tools (Tableau), Excel/Google Sheets

Data Infrastructure: Data modeling, ETL/pipeline architecture, schema design, self-service analytics design

AI & Tooling: Generative AI application development (Streamlit), LLM integration, prompt engineering, Claude/GPT API integration, agentic workflows, Python (working knowledge)

Leadership & Strategy: Scaling distributed analytics organizations, analytics maturity model design, coaching non-technical leaders, cross-functional stakeholder management, measurement framework & KPI design, executive communication, data culture change management
